User Stories Backlog

1. Student sign-up:

As a student who is looking for a job, I want to create my account so that I can have access to browse job postings on this platform.

2. Students upload portfolios:

As a graduate student who is about to graduate, after creating my account, I want to edit my portfolio to update my information with new skills or project experiences so that employees will see my new abilities and make me more competitive.

3. Admin verifies job posts:

As a system admin, I want to verify and post each job offer that was added by employees so that students can see the newest job posts and choose to apply.

4. Employer post job openings:

As an employer, I want to post my job openings in the public panel with detailed descriptions so that students or job seekers can view on their sides and apply if they are interested.

5. Employer checks student's profile:

As an employer, I want to see the students' or the job-seeker's profiles so that I can find the person I need by myself.

Task breakdown

1. Student sign-up:

- As a student, I want to click a button on the homepage so that I can enter the account creation page.
- As a student who is creating my account, I want to enter as much information about myself as possible so that I can show fully my ability.

2. Students upload portfolios:

- As a student, I want to click an edit button so that I can modify my portfolio to update my new information and show my new skills
- As a student, I want to change my profile picture to show my personality.

3. Admin verifies job posts:

- As a system admin, I want to delete expired job postings so that avoiding unnecessary trouble and save more storage space.
- As an admin, I want to check the job openings which are posted by employers in advance so that I can verify their authenticity and compliance with the standards for posting on this platform.

4. Employer post job openings:

- As an employer, I would like to be notified of the posting criteria prior to the official posting of the job posting.
- As an employer, I want to add some industry-classified tags so that job seekers can search more accurately or know in advance.

5. Employer checks student's profile:

- As an employer, I want to click on a job seeker's avatar so that I can go to their homepage and browse their information and skills.
- As an employer, I would like to have a notification feature so I can interact with the desired candidate and give me the opportunity to learn more about him or her.

Open Issues or plan for the Next sprint

In this round of sprints, we confirmed the important requirements of the project as user stories, formulated technical approaches suitable for our team, and built a basic system platform.

We also encountered many problems. Unfamiliarity with the Node.js express framework will undoubtedly make us spend more time learning this emerging technology on the back end. For the front end, we also have some members who do not have corresponding experience, which also needs to invest time.

In addition, we assigned each member some challenging work for future sprints. In the next sprint, we will continue to optimize the results we have now, and gradually implement various functions. First of all, we will improve the corresponding interface for different user identities, such as student, employee, and admin. At the same time, adjust the backend to match the frontend data. After each member completes the assigned tasks, we will integrate each branch and test each function. According to the feedback of our test results, we will make plans and adjustments for our next step.
